

Draft Program Overview

Mission: Code for Life equips youth living in high poverty neighborhoods with the life and technology skills they need to overcome the obstacles of poverty so they can thrive in life spiritually, emotionally, technologically, and economically through a methodology of tech and life skill building through the financial support of individuals, corporations, churches, and foundations.

Technology Skill Building: Equips young people with the certifiable code & language knowledge and skills in the areas of Web, Mobile, and Hardware Development to be the creators & makers of the future.

Case Management: Carefully track progress of youth in their tech and life skill development to encourage further growth & development.

Life Code Coaching: Matching caring adults with young people as they determine their own code for life.

Vision Casting: Cast a vision for God, self, and future in such a way that it transforms how they view God, themselves, and their future. Where they see themselves as creators & makers.

Positive Peer Group: Provide a structured setting for tech & life skill building training and activities with the networks they need to thrive in life.

Technology Focused Outcomes: Today's Technology Based economy requires the ability to collaborate, present ideas, create & make what society needs by using the critical coding & technological skills that are so needed today. Code for Life will equip young people living in high poverty neighborhoods with these skills through training by those already knowledgeable and a curriculum where youth will become proficient in either Web, Mobile, or Hardware Development and the various applications.
